Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I need a quick way to check a country's development level. • I want to see which indicator impacts HDI the most. • A web form that returns the score instantly would be ideal.	THINKS • Wonders if Linear Regression is accurate enough for real policy. • Thinks about comparing countries side-by-side. • Considers whether GNI alone can flip the tier.
PERSONA NAME (Development Researcher)	
DOES • Inputs life expectancy, schooling years, and GNI into the form. • Reads the predicted score and tier on the result card. • Calls the /api/predict endpoint for batch predictions.	FEELS • Excited when the model returns a correct classification. • Confused if the score doesn't match known HDI rankings. • Satisfied when the tier gauge visual confirms the result.
