

Problem-Solution Fit

Date	02 July 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Use the framework below to ensure the proposed HDI Predictor solution accurately addresses the root causes, behaviours, and limitations of the target audience.

1. CUSTOMER SEGMENT(S) [CS]	2. PROBLEMS / PAINS [PR]	3. TRIGGERS TO ACT [TR]
Government policymakers, researchers, students, NGOs, and development analysts.	Difficult to predict HDI accurately using multiple development indicators manually.	New development data, policy planning, research work, and academic assignments.
4. EMOTIONS [EM]	5. AVAILABLE SOLUTIONS [AS]	6. CUSTOMER LIMITATIONS [CL]
Before: Confused and frustrated. After: Confident and informed.	UNDP reports, Excel sheets, and research papers. Accurate but manual and time-consuming.	Limited internet access, technical knowledge, and analytical software.
7. BEHAVIOR [BE]	8. CHANNELS [CH]	9. ROOT CAUSE [RC]
Users manually compare reports and calculate HDI, making the process slow and error-prone.	Online: UNDP, Kaggle, Google. Offline: Reports, books, Excel sheets.	No automated ML-based tool for quick HDI prediction and analysis.
10. YOUR SOLUTION [SL]		
Flask-based HDI Predictor using Linear Regression to predict HDI score and category instantly from development indicators.
