

Project Executable Files

Date	02 July 2026
Team ID	xxxxxx
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (project execution instructions)	Yes
3	Training and Flask <code>requirements.txt</code> files	Yes
4	Dataset (HDI.csv)	Yes
5	Environment configuration file (.env)	NA (No API keys required)
6	Deployed application URL	NA (Runs locally)
7	Executable / APK	NA (Web application only)
8	Docker / Container configuration	NA
9	Test files and test results	Yes
10	Demo video / Project walkthrough	Pending

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

ML-0027-HDI/

Step 3: Deployment / Access Details

Item	Details
Hosted / Deployed URL	http://127.0.0.1:5000 (Local Flask Server)
Login Credentials	No authentication required
Platform / Hosting	Local Machine (Flask Development Server)
Repository Link	https://github.com/Mcharan07/A_Comprehensive_Measure_of_Well-Being/
Demo Video Link	https://github.com/Mcharan07/A_Comprehensive_Measure_of_Well-Being/tree/main/Video%20Demo/

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Project Structure

```
A_Comprehensive_Measure_of_Well-Being/
├── ML-0027-HDI/
│   ├── Dataset/
│   ├── Flask/
│   ├── Training/
│   ├── README.md
│   └── .gitignore
```

Step 1: Clone the Repository

```
git clone https://github.com/Mcharan07/A_Comprehensive_Measure_of_Well-Being.git
```

Step 2: Open the Project

```
cd A_Comprehensive_Measure_of_Well-Being
cd ML-0027-HDI
```

Step 3: Create a Virtual Environment

Go to the **Flask** folder.

```
cd Flask
```

Windows

```
py -3.11 -m venv venv
```

Activate the environment

```
venv\Scripts\activate
```

Step 4: Install Dependencies

```
pip install -r requirements.txt
```

Step 5: Start the Application

```
python app.py
```

Step 6: Open the Browser

Visit

<http://127.0.0.1:5000/>

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality and completeness of the HDI dataset.	Use updated datasets and advanced machine learning models in future versions.
2	The application runs only on a local Flask development server.	Can be deployed to cloud platforms such as Render, Railway, or AWS.
3	The model uses Linear Regression, which may not capture complex relationships between socioeconomic indicators.	Future enhancement includes implementing Random Forest, XGBoost, or other advanced regression models.
